Tired of Cranking?

ShoreStation[®]
The original since 1959

If you're tired of cranking your boat lift, try the **ShoreStation FlexPower Electric Lift** instead!

- **Simple, Integrated Design**

ShoreStation's FlexPower Electric Lift has been engineered from the ground up; the "big wheel" remote drive motor and motor mounts have all been eliminated for simple, trouble-free operation.

- **Speed Matters**

This system out-performs after-market direct drives. It has even come close to matching our top-of-the-line hydraulic lifts in speed tests.

- **Powerful Control at Your Fingertips**

A state-of-the-art electronic control system offers the ultimate in push-button convenience.

- **Choose Your Power Source**

The FlexPower Electric Lift operates on 12 volt or 24 volt DC. The batteries are maintained by your choice of an 110 volt AC charger or a solar charging system.
